SUMMARY

AI-native software engineer who builds AI agents and the backend they run on, from an empty repository to production, alone or leading teams of two to four. I plan my own milestones, write things down, and stay to run what I ship.

EXPERIENCE

AI Gateway Platform Engineer · Enterprise Client (Banking) — Aug 2026 – Present
Outsourced contract · I built the extension layer and own delivery and planning; the lead engineer reviews

- Extended the bank's open-source LiteLLM gateway with a separate package, so upstream releases still merge: tamper-evident audit log, Vietnamese PII guardrails, SSO and roles, budget-aware routing, alerts and bulk onboarding.
- Built Bedrock cost reconciliation against invocation logs and the AWS bill (Athena) by team, user and model; checking it against the real invoice exposed and fixed a 4× over-count.
- Added cross-account access through assumed roles, alerts by email, SES and SNS, X-Ray-linked traces and Terraform for the AWS stack; wrote the architecture docs and runbooks for the handover.

Backend & AI Engineer · F&B and AI-Commerce Company — May 2026 – Present
Contract

- **Siz** (MCP gateway): built the Go MCP server and web app that let AI assistants book cinema and flight tickets on real merchant sites, with OAuth 2.1 + PKCE, RFC 9421-signed requests and payment handed back to the user's bank app via VietQR, plus an AI-Ready scorer that grades merchant sites for agents.
- **Bảo Bối** (voice ordering): built chat and real-time voice ordering (LiveKit) that ran in a real café and pushed orders to the POS; rebuilt it for many shops with Postgres row-level security.

Co-founder · Zillexa · *independent dev studio, five members* — 2024 – Present

AI Agent Consultant Engineer · Hưởng Nghiệp Á Âu — Apr – Sep 2026
Freelance · sole developer · handed over

- Built a 24/7 admissions chatbot and advisor cockpit on a live CRM for a 19-branch academy, grounded by CRM data and hybrid RAG so it never invents courses; advisors accepted 97% of its drafted replies.
- Ran it on-prem inside their network, with a provider-agnostic LLM layer and nine end-to-end test suites before handover.

Core Full-stack Developer · Enterprise Accounting SaaS — 2025 – Sep 2026
Top contributor in a 3-engineer team · handed over

- Built consolidated reporting (Circular 202), safe batch posting with period locking and the CI/CD pipeline for a multi-company platform used daily by 20 accountants.

AI Team Lead, Computer Vision · Whammy Tech — Jun 2025 – Jan 2026
Contract · led 4 engineers

- Owned all AI for real-time fall and seizure detection on live cameras (YOLO pose, LLM incident reports); a five-frame rule cut false alarms by 84%.

Team Lead, Software Engineer · NEURADAO — Oct 2025
Contract · led 3 engineers

- Set the architecture and wrote the trading logic, AI chatbot and backend of a live AI trading platform shipped on AWS in 20 days.

IT Support Technician · FPT University IT · *part-time, while studying* — Jan 2022 – Dec 2024

OPEN SOURCE

- **hotwatch**: fast system monitor in Go for macOS, Windows and Linux, with a remote agent
- **esp32-translator**: on-device English ↔ Vietnamese live translator (ESP32-S3, iPhone, AirPods)

SKILLS

- **AI:** Claude Agent SDK, MCP, LiteLLM, RAG, pgvector, LiveKit, YOLO · Claude, OpenAI, Gemini, AWS Bedrock
- **Engineering:** TypeScript, Python, Go, SQL · NestJS, React, Next.js · PostgreSQL, Redis · OAuth 2.1
- **Cloud & Ops:** AWS, Terraform, Docker, Kubernetes (k3s), ArgoCD, GitHub Actions
- **Languages:** Vietnamese (native), English (written fluent, spoken intermediate)

EDUCATION & AWARDS

- **B.Eng. Software Engineering**, FPT University, Ho Chi Minh City · GPA 3.47/4.0 · 2026
- **Chord**, ETHGlobal Singapore 2026 (TOKEN2049): Finalist, 2nd prize, top 5 on the main track
- **Viettel AI Race 2026**: Runner-up (Top 4), finalist out of 1,628 teams

Interests: robotics, virtual assistants, open-source tooling.
